GREEN NETWORK EXCHANGE

DRIVING EFFICIENT E-WASTE DISPOSAL

Steady socioeconomic development and technological advancement led to the invention of electrical and electronic equipment (EEE), such as televisions, PCs, and mobile phones—tools that have made our lives easier and more entertaining. However, these products quickly become obsolete, creating electronic waste (e-waste). Its hazardous chemicals present a significant global challenge and require highly technical and expensive recycling processes.

A leader in green technology, Green Network Exchange recognizes the inherent value of these materials and processes them to be reused, refurbished or recycled, minimizing the e-waste load on landfills.

Green Network Exchange was established with the aim of helping the environment and creating a sustainable process to manage e-waste efficiently. Servicing all of New England and New York, it is one of the largest electronic waste recycling companies, servicing over forty property management firms and more than 2,000 clients.

As a specialist in their field, Green Network Exchange ensures that it caters to the constantly evolving needs of the modern enterprise. For instance, when new equipment

versions are launched, businesses quickly upgrade their systems to improve operations. Old equipment accumulates, and organizations find themselves without the necessary resources and infrastructure to dispose of this e-waste in an environmentally friendly manner.

Working with its clients to understand their requirements enables Green Network Exchange to help them determine the best course of action to manage their e-waste. They collaborate with onsite IT personnel to organize and track all assets, determine values, provide an estimate of the project's cost, and chart the best recycling or refurbishing options. All of the electronic waste is put through a functional test, and if it can be used again, it is repaired and put out onto the secondary market for either reuse or sale as refurbished equipment.

Through all interactions with clients, Green Network Exchange fosters a professional approach. They issue certification of hard drive destruction and inventory intake reports for the recycling of obsolete electronics and systems.

"Our mission is to be customer-centric and provide complete electronic waste services to meet the needs of our clients." "We provide recycling, asset-tracking, destruction, and salvaging of e-waste material with a goal to maintain a green environment," says David A. Williams, President/CEO, Green Network Exchange.

Since 2009, Green Network Exchange has been a reliable agent for property managers of office buildings like Boston Properties, CBRE, Lincoln Property Company, and their tenants, for the recycling of used and retired electronic equipment in a safe and efficient manner. They provide corporations with scheduled recycling and electronic waste collection events, and pickups at their convenience.

"If the material happens to be high-end equipment, we can provide an assessment for the value of the inventory and make arrangements to purchase the equipment. This is an excellent method to help recover and offset costs from fully depreciated assets," says Williams.

Our mission is to be customer-centric and provide complete services for all electronic waste requirements. We provide recycling, asset-tracking, destruction, and salvaging of e-waste material with a goal to maintain a green environment

Other than large corporations, Green Network Exchange works with schools, small businesses, industrial parks, municipalities, and non-profit organizations and sponsors events and collections across cities and towns.

In the current climate, sustainability is being prioritized for all development activities by integrating social, economic, environmental, and technological perspectives. By commoditizing electronic waste, Green Network Exchange helps protect the environment, create jobs, and save energy. **CR**

CIOReview

Green Network Exchange

4gne.com

Green Network Exchange is a green technology company that has become one of the foremost and largest electronics waste recycling companies servicing all of New England and New York for over thirty property management firms and more than 2000 clients

JT Environmental Consulting, Inc.

jtenv.com

JT Environmental Consulting provides bespoke environmental consulting services including, but not limited to, internal audits, system implementation, document control, training, and system updates to simplify the environment security and safety compliance process

Back Thru The Future

backthruthefuture.com

Back Thru The Future® is among the country's most proficient computer recycling and safe data destruction firms, with over 30 years of expertise and over 1000 clients in the Northeast. They offer regulatory-compliant IT disposal services to safeguard our clients from unintended violations of state and federal environmental & data privacy requirements

COM2 Recycling Solutions

com2recycling.com

COM2 Recycling Solutions has provided high-quality electronics recycling in the Midwest and Canada since 2001. COM2 Electronics Recycling program takes equipment, including Laptops, Desktops, TVs, CRTs, LCDs, Printers, office electronics, and the like... and separates their contents into specific bins for glass, plastic, iron, aluminum, copper, platinum, metal, and circuit boards (RAM/Gold)

CINTITEC

en.cintitec.com

CINTITEC is a company that specializes in installing and administering reverse logistics of e-waste for recycling, data deletion, and organic waste treatment using decomposition equipment. Data destruction, E-waste recycling, paper, plastic, metal scrap, bulbs, batteries, and organic rubbish recycling are all part of the service range

Electronics Waste Management LLC

ewmanagementllc.com

EWM is a one-stop shop for electronic and computer recycling and trash management that rigorously adheres to a zero-waste-to-landfill policy. As an environmentally conscious organization, we are devoted to providing Corporate Social Responsibility (CSR) services to individuals, businesses, and state and local governments to assist them in maintaining a cleaner, greener, and healthier environment

Homeboy Electronics Recycling

homeboyrecycling.com

Homeboy Electronics Recycling is a recognized and award-winning social organization that provides countrywide IT asset disposal and management services. Its experts can assist users whether they are a huge corporation in a compliance-driven sector or a tiny office needing a simple pickup

10 MOST PROMISING E-WASTE MANAGEMENT SERVICES COMPANIES - 2023

Powerhouse Recycling powerhouserecycling.com

PowerHouse Recycling, Inc., based in Salisbury, North Carolina, was formed in 2008 and is a market leader in licensed electronics recycling and IT asset management services. Recognizing a need for superior levels of customer service in the eWaste market, PowerHouse Recycling Inc's senior management, who collectively have over 25 years of experience in IT asset management, set out to build a customer-first, high-level-of-service brand

TES tes-amm.com

TES is dedicated to doing its part to complete the loop. They treat their electronic trash using sustainable recycling procedures, from pick-up to repurposing. Every stage of the process includes security to preserve the brand's reputation while minimizing environmental effects

SAMR Inc. samrinc.com

SAMR, an electronics recycling organization, offers the recycling solution that corporations, municipalities, government agencies, schools, and enterprises require. The computer recycling experts will guarantee that any data is securely destroyed and that any old systems and displays are appropriately discarded
